# The AI-Era Listening Set

**AI doesn't make the experience go away. Measure the building you're actually constructing.**

From ***AI Will Scale Good Leadership and Bad Leadership:*** *The CHRO's Method for Redesigning Work Before AI Scales What's Broken* by Liz Corey · Toolbox No. 12

Four signals, added to the instruments you already run. Not a new survey. Four items in the next pulse, measured by team and by manager, trended through every rollout, and reported beside the efficiency numbers they keep honest.

## THE EMPLOYEE ITEMS

### 1 Trust

**"I can rely on the AI tools I am given to be accurate and fair, and I know what to do when they are not."**

| Strongly disagree | Disagree | Neither | Agree | Strongly agree |
|---|---|---|---|---|

**Why this signal.** Trust is what makes people verify instead of forward, and escalate instead of shrug.

**If it is low.** Low: the knowledge AI inherited is not ready, or nobody told people where the escalation path is. Chapter 3 and Chapter 4.

### 2 Role clarity

**"I understand what my job is now, what has changed, and why my work matters."**

| Strongly disagree | Disagree | Neither | Agree | Strongly agree |
|---|---|---|---|---|

**Why this signal.** A task changed destination. Did the person find out from a plan, or from the system?

**If it is low.** Low: the no-surprises message has not been delivered. Chapter 13.

### 3 Reinvestment

**"The time technology has freed for me has gone to more valuable work, not just more work."**

| Strongly disagree | Disagree | Neither | Agree | Strongly agree |
|---|---|---|---|---|

**Why this signal.** Freed capacity does not redirect itself. It gets absorbed by whatever is loudest.

**If it is low.** Low: the redesign named no reinvestment, or named one and nobody held it. Chapter 5, step six.

### 4 Fear, asked straight

**"I believe AI here is being used to help me do better work rather than to reduce the need for me."**

| Strongly disagree | Disagree | Neither | Agree | Strongly agree |
|---|---|---|---|---|

**Why this signal.** Fear is the one variable that silently taxes everything else you are trying to do. Collect it anyway.

**If it is low.** Low: tell people the truth early. Chapter 13.

**Keep the scorecard.** KPIs remain incredibly important, and they don't retire because the tools got smarter. These four are additions to that discipline, not replacements for it.

THE CANDIDATE ITEMS

## The candidates are having an experience too

Every candidate had an experience with your company, and they are customers, future employees, and your employer brand walking around with an opinion. Measure candidate experience with the same seriousness.

| MEASURE | WHAT IT IS | HOW TO COLLECT IT |
|---|---|---|
| **Time to human decision** | Days from application to a decision a person made, not a filter. | ATS: application date to the first human-recorded disposition. Median and 90th percentile. |
| **Clear outcome rate** | The percentage of applicants who ever hear a yes or a no from you. | ATS: applicants with a sent outcome divided by all applicants, by requisition. Silence counts as no outcome. |
| **Process knowledge demanded** | How much a candidate must understand about your process to get through it. The target is nothing. | Count the steps a candidate must initiate, the portals they must learn, and the questions they must ask to proceed. |
| **Would recommend, asked of rejected candidates** | Because that is where the truth lives. | One question, sent with the rejection: Would you recommend applying here to a friend? Report the rejected-candidate score separately. |

**The outside-in test.** Apply to your own company this month and live your funnel from the outside. Record four things: how many steps you had to initiate, how many days until a human decided anything, what you had to already know to get through, and which parts you would accept from a company courting you as a customer. Bring what you find to your head of talent acquisition, not as an indictment but as a candidate for the seven-step redesign method.

THE DISCIPLINE

## By team, by manager, through every rollout

**By manager.** The single largest lever on whether people are coached, developed, heard, and retained is the manager they report to. That is where the variance lives and where the coaching should go.

**Through every rollout.** Baseline before the next rollout, not after. Then rerun the pulse and put the movement, or the lack of it, next to the efficiency numbers.

**Beside the efficiency numbers.** One page. Hours saved on the left. The four signals on the right. Neither one alone tells the truth.

**When a company gets this right, the experience data is the first place it shows.** When thousands of physicians got an AI scribe for their visit notes, the headline was 15,800 documentation hours returned in a year. The story underneath it: 84 percent said communication with patients improved, and 82 percent said work satisfaction rose. AI took the keyboard. The doctors got their patients back. Measure for that.

BASELINE AND REPORT

## “This is the data that predicts whether the efficiency survives.”

Add the four items to your very next pulse, before the next rollout, so you have the baseline every later argument will need. Then report it on the same page as the AI efficiency metrics, and say that sentence.

**Rollout:** _____ **Baseline date:** _____ **Rerun date:** _____

| | | TRUST | | ROLE CLARITY | | REINVESTMENT | | FEAR, ASKED STRAIGHT | |
|---|---|---|---|---|---|---|---|---|---|
| TEAM | MANAGER | BASE | AFTER | BASE | AFTER | BASE | AFTER | BASE | AFTER |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |
| | | | | | | | | | |

### Candidate measures

| MEASURE | BASE | NOW |
|---|---|---|
| Time to human decision | | |
| Clear outcome rate | | |
| Process knowledge demanded | | |
| Would recommend, asked of rejected candidates | | |

### The one-page executive report

**Left: the efficiency numbers**
Hours returned. Cost per transaction. Cycle time. Error rate.

**Right: the four signals**
Trust. Role clarity. Reinvestment. Fear. By team and by manager, baseline and after.

Across the top, the sentence. Underneath, one line: which managers’ teams moved, and which did not.

**Want the analysis done for you? The Listening Analyzer reads your pulse results by team and by manager, trends them across rollouts, and drafts the executive page. Early access. Call for pricing. Book a conversation at onthegrow.ai**
