# The GROWTH™ Execution Model

## One model. Every conversation. Real results.

Six steps. One language for leaders and AI agents. Nearly forty business situations, one architecture.

**AI does not fix leadership. It scales it.** A dozen leaders running a dozen operating rhythms with a dozen different levels of capability is variance AI will feed on and the organization will feel. Add AI and the good, the bad, and the variance all compound.

Every rollout, every agent, every one-on-one runs through the same moment: someone sets a goal, faces reality, weighs choices, decides, follows through, and sustains it, or does not. The GROWTH Execution Model is the structure of that moment. Install it in your leaders and your agents, and every conversation in the company runs on one architecture.

### The six steps

| STEP | THE QUESTION | WHAT AI DOES | WHAT THE LEADER DOES |
|---|---|---|---|
| **Goal** | *What outcome are we here to achieve?* | Drafts and contextualizes | Chooses the goal, owns the why |
| **Reflect** | *What is happening?* | Assembles the record | Names the truth |
| **Options** | *What choices exist?* | Widens the set | Weighs the values, selects |
| **What's Next** | *What will we decide, and who owns it?* | Captures and routes | Decides and owns |
| **Tracking** | *What steps get us to the due date, how will progress be visible, and where will it be hardest?* | Watches and flags | Responds, holds accountable |
| **Habits** | *What behaviors must be sustained?* | Reinforces at the moment of need | Sustains and models |

**The bright line.** AI strengthens the step. The leader owns the step.

*GROWTH extends Sir John Whitmore's GROW, a model built for coaching conversations. GROWTH runs every operating rhythm in the company: the team meeting, the account review, the board prep, the one-on-one, the agent's loop. Tracking and Habits are the two steps that make that possible. The lineage is acknowledged. The execution system is ours.*

### Why this is the only model you will need

#### It is built for execution.

Most business conversations end at agreement. GROWTH adds the two steps that make agreement hold: Tracking, the plan and the proof, and Habits, the development that reinforces culture and builds skills. Those two steps are the difference between a pleasant meeting and leadership that executes.

#### It runs both halves of the workforce.

A leader runs GROWTH as a conversation or an agenda. An agent runs it as an operating loop. Same six steps, same language. Handoffs stop being translations, because every escalation arrives already structured: the goal, what is happening, the options, whose decision it is.

#### It shows up when the work gets hard.

Capability only matters if it is there in the moment. GROWTH is designed for the next difficult conversation, decision, or point of accountability. The same cadence, used consistently and reinforced by leadership, until the process becomes how the team thinks, decides, and executes.

## Nearly forty business situations. One architecture.

The context changes constantly. The six steps do not. Each situation has its own working guide. A sample:

- One-on-ones
- Interviews and hiring
- Team meetings
- Sales conversations
- Workforce reductions
- Quarterly business reviews
- Performance conversations
- Onboarding
- Strategy sessions
- Customer and account reviews
- New leader assimilation
- Talent and succession reviews
- Hard conversations
- Delegation
- Board preparation
- Project kickoffs
- Managing up
- After action reviews

## How it applies to AI

An agent's job description maps almost one to one to the six steps. Install the model in both workforces and the mixed team speaks a single language.

| STEP | IN A LEADER'S CONVERSATION | IN AN AI AGENT |
|---|---|---|
| **Goal** | The outcome named out loud at the start | The agent's purpose statement |
| **Reflect** | Ground truth, including the part no dashboard logged | Retrieval of current state from verified sources |
| **Options** | A real option set, not the last thing and the loudest thing | Generation of alternatives for a human decision |
| **What's Next** | The decision, the owner, the date | Decision rights within bounds, escalation beyond them, always with an owner |
| **Tracking** | The steps to the due date, the signal, the hard part planned for | The review cadence and the sample checked every week |
| **Habits** | What we keep doing after today | Instructions and boundaries reinforced every cycle |

## What it produced

One company, from installation to exit, with GROWTH as the standard for every leader.

| | | | |
|---|---|---|---|
| **+45%** | Employee engagement | **+32%** | Leader effectiveness |
| **−34%** | Voluntary turnover (33.7% to 22.4%) | **+13%** | Revenue over the same period |
| **+8 pts** | EBITDA margin over the same period | | |

The first three are what the model was installed to move, and they moved. Revenue and margin are reported for context, not claimed as caused by the model. Every result came from the human half of the workforce, before an agent ran a single step.

> **Stronger leaders. Faster execution. Better results.** One standard for humans and agents, with development built into the work. For a CEO, that is performance. For a CHRO, that is leadership capability that scales. For a private equity operator, that is repeatability across the portfolio.

## How it installs

Not a program. A changed agenda. GROWTH is the engine of the Leadership Infrastructure Journey. First we decode and redesign the work, so the model runs on real tasks, named owners, and true information. Then it goes into both halves of the workforce, in the order your work calls for.

**Leaders:** the team meeting runs on the six questions for one month. Decisions leave with owners and dates. Tracking opens the next meeting. Then one business leader runs it in their own rhythm. **Agents:** GROWTH is written into every agent job description, as mapped above.

*Starting with leaders? GROWTH installs without AI. The agent layer goes in on the same foundation when you are ready.*

**When your leaders run it without us, it stops being a model. It becomes how the company works.**

**See what your leaders can carry. Take the AI Leadership Load Assessment, or start the conversation, at onthegrow.ai**
