The Leadership Infrastructure Journey

Five stages. One engine: the GROWTH™ Execution Model.

For leaders and AI agents. Sequenced to your work. Built to compound.

> ***"Never automate dysfunction."***

AI does not fix leadership. It scales it. Within 18 months, many leaders will have both people and AI agents reporting to them. Installing Leadership as Infrastructure starts with the work: the tasks inside each job, the structure and roles around them, and what humans and AI will each own. Redesign the work and implement AI at the same time, and your leaders are ready to run one team on one standard.

STEP 0 · THE STARTING POINT

AI Leadership Load Assessment

Shows what your leaders can carry before AI multiplies it. Every engagement is built from the results.

1

Decode

See the work before you touch the technology.

- Agent inventory: where software already acts with authority
- Task taxonomy: function to process to activity to task
- Knowledge readiness: is the information AI will inherit true
- The sequencing call: agents first, leaders first, or together

POWERED BY Work Taxonomy · AI Opportunity Assessment · Knowledge Readiness Test

2

Redesign

Decide what humans and AI each do.

- Seven-Step Redesign Runsheet on a high-volume process
- Agent Job Descriptions with named owners
- Human / Assist / Automate / Agent Matrix
- Decision rights and the leadership capability gap

POWERED BY Redesign Runsheet · Agent Job Description · Decision Rights Map

3

ALSO A STARTING POINT

Scale

One engine for both halves of the workforce.

- GROWTH installed in leaders and agents, in the order Decode set
- Then one business leader runs it in their own rhythm
- Leaders: the team meeting runs on the six questions for one month
- Agents: GROWTH written into every agent job description

> *Starting with leaders? GROWTH installs without AI. The agent layer goes in on the same foundation when you are ready.*

4 Embed

Turn new ways of working into the way work gets done.

- Application Guides inside real operating rhythms
- Leaders coach in the moment, not after the fact
- Habits that reinforce culture and build skills
- Culture and engagement measures continue, run differently

POWERED BY Leading People | Operating Rhythms | Building Culture

5 Execute

Put the operating model to work.

- Ninety-day proof of method
- Succession and transitions that hold under pressure
- A leader bench that runs it without us
- Leadership infrastructure ready for diligence

POWERED BY Talent and Succession | Leadership Transitions | HR Practices

Stronger leaders. Faster execution. Better results. One standard for humans and agents, with development built into the work. For a CEO, that is performance. For a CHRO, that is leadership capability that scales. For a private equity operator, that is repeatability across the portfolio.

BUILT FROM THE BOOK

The five stages are the method in *AI Will Scale Good Leadership*. The tools named on each stage are the tools in the book. What you read is what we install.

THE OUTCOME

One standard for humans and agents. Consistent execution. Results that hold through whatever comes next.
